---

Greetings,

After an hour of unsuccessful fishing attempts at SMB-002 target location (RM 2), the crew has decided that the habitat is unfavorable for sampling and has moved north. The vessel is currently stationed at the sampling boundary near RM 1.9, just north of target site SMB-001 and has been fishing for approximately 20 minutes with no SMB bites. The crew will continue to attempt sample retrieval at this alternate station, before working their way south back towards the proposed location (SMB-002). SMB-002 is the last sample to retrieve for the fish tissue sampling study. Included are photos of the alternate site location for SMB-002

Photo 1: Alternate sampling location near RM 1.9, within study boundary

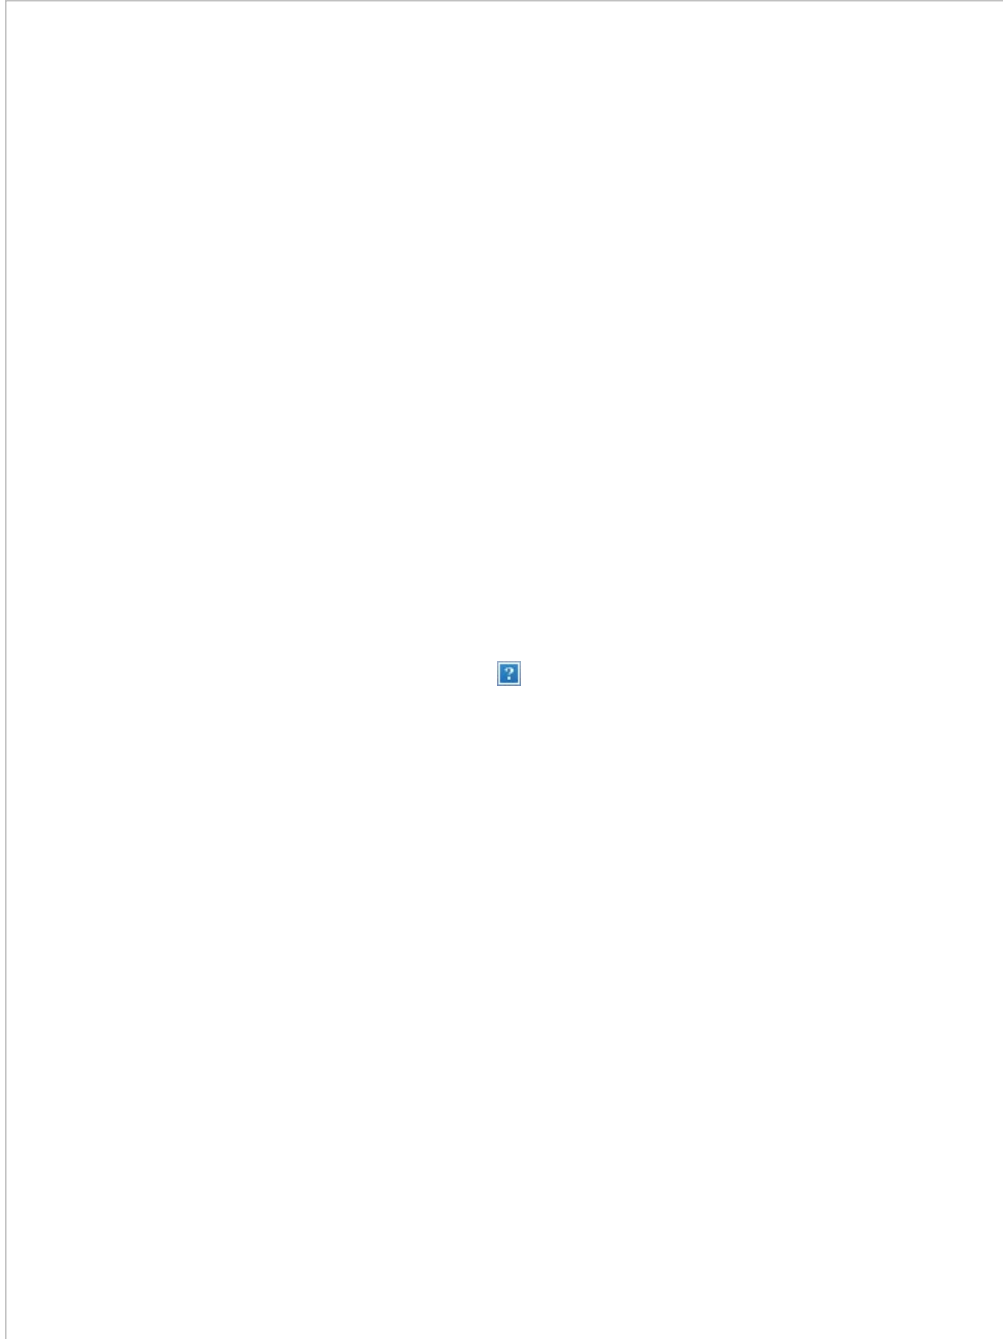

Photo 2: alternate target location facing south

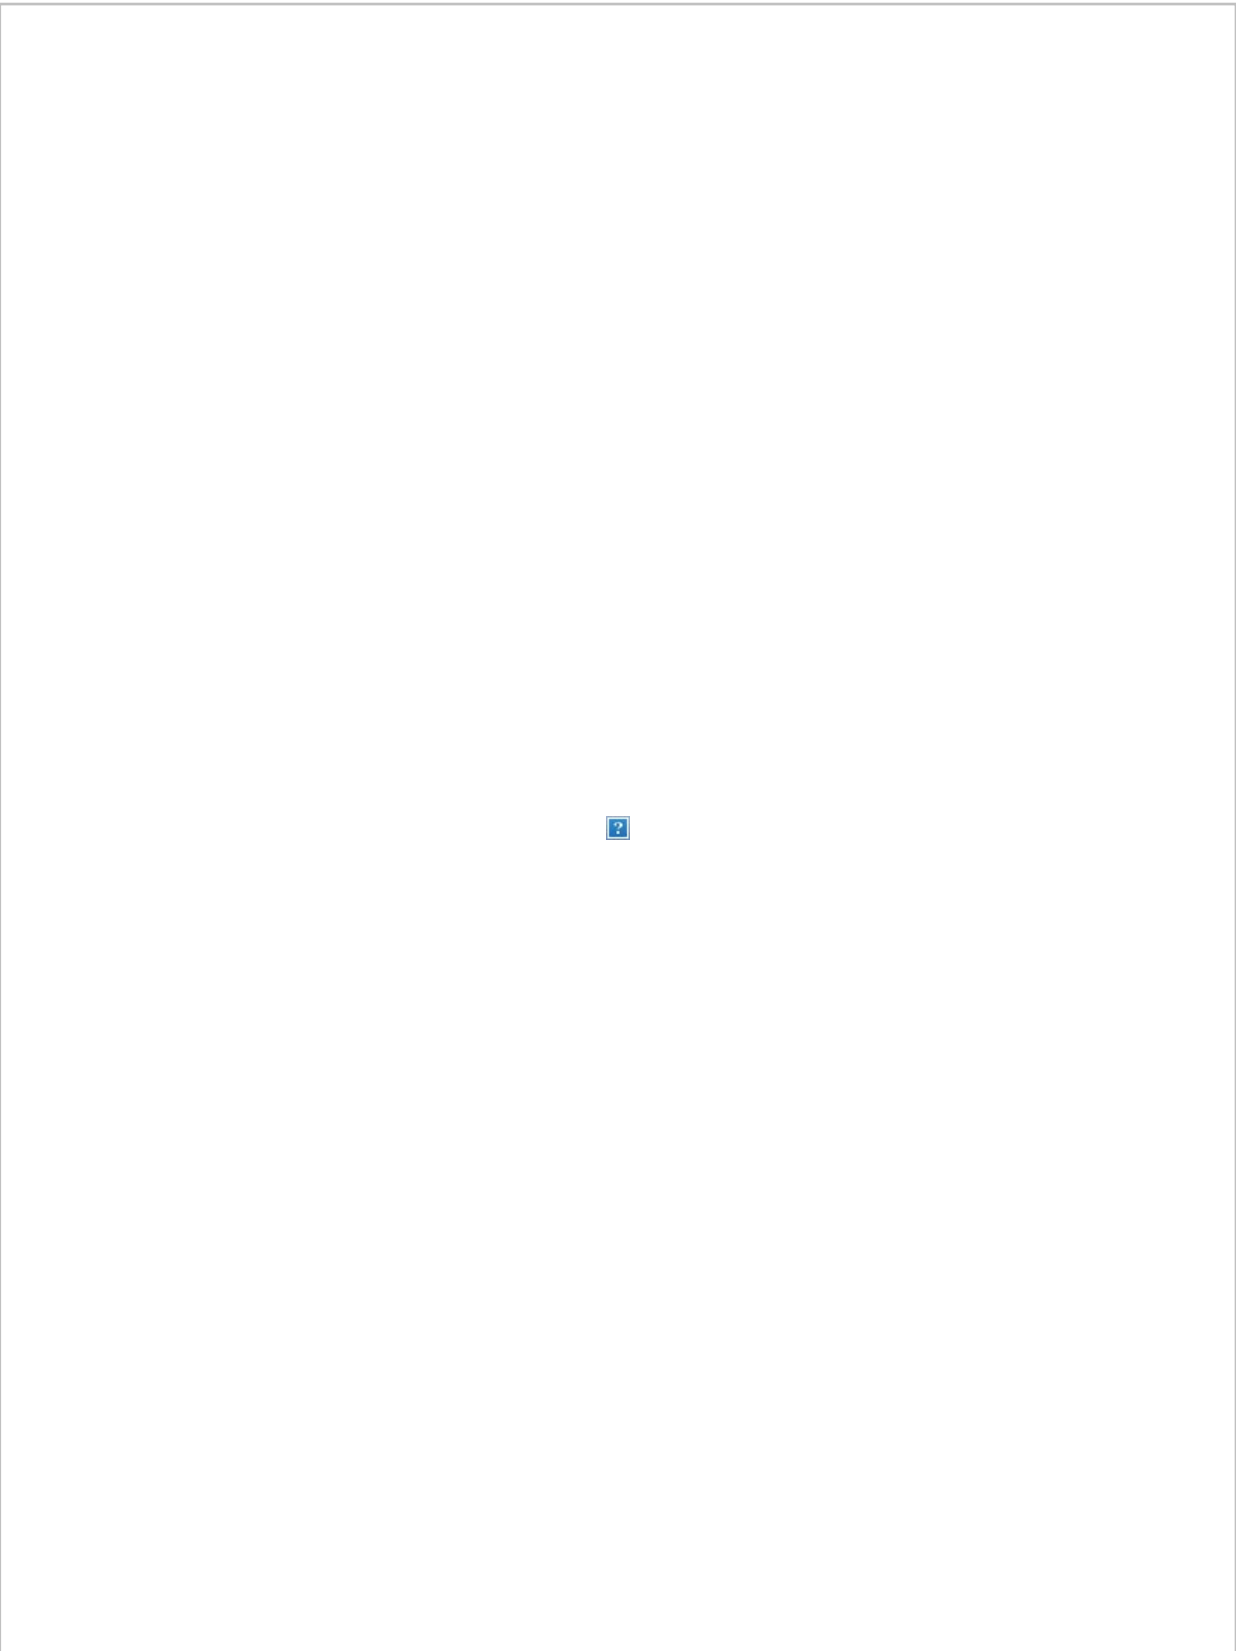

Photo 3: Alternate target location facing north
